# eS-Vault 1.0

## Software and its Security

The major threat for Software Publishing & Development companies is the security over their software Installer files. Today software Installers are distributed either in CD's, DVD's or the Internet, which is vulnerable to Counterfeiting and Unauthorized Duplication. Security is very limited to simple authentication measures with software Installers.

Any duplicator can copy the installer files onto other devices like CD, DVD and mass replicate it. This would cause a loss of millions of Dollars to the Software Publisher.

## The need

- To Protect Software Installers
- To block counterfeiting and unauthorized duplication of software installers
- To provide a convenient and secure medium for software distribution
- To enhance software security

## Introduction to eS-Vault 1.0

"eS-Vault 1.0" is a new format for software/game storage and security. Its primary goal is convenience and security for an IPR holder. It has all the conveniences of being a small plug-n-play pen drive, compatible with all computers and laptops yet it is most different. For the first time, a device has been designed for secure storage and delivery of enterprise and entertainment [games] software. It secures the software stored in it, ensuring better long term quality of the product. "eS-Vault 1.0" blocks all forms of unauthorized duplication or counterfeiting of Enterprise Software and Entertainment Software. It can also be used to play the software directly without installation onto the computer.
