

## »» Feature of the MyIP-Vault

- »» Convenient and Secure storage of digital content.
- »» Uses the convenience and user-friendliness of a USB media
- »» Security against unauthorised copying of one's IPR
- »» Security against unauthorised editing of one's IPR
- »» Security against unauthorised deleting of one's IPR
- »» Secure "File Sharing" methodology
- »» Effective Source-Code protection medium
- »» Comes with its own easy to use writer software
- »» Comes in models up to 32 GB of memory

**"Let no one misuse your digital IP"**

## »» Trinfin MyIP-Vault

*This year, US President George W. Bush wrote, “In today’s increasingly competitive world, improved enforcement of intellectual property rights is critical to establishing free and fair trade among nations and to protecting consumers and hardworking innovators”. The total piracy and counterfeiting losses of IPR (Intellectual Property Rights) are calculated at over \$600 Billion in 2006. Individuals, small corporates and even large corporate companies, do not have adequate security for their IPR.*

*Trinity Future-In has developed a unique technology, which addresses this world-wide issue. Anyone or any company needing their sensitive, confidential or personal data to be stored securely now has the answer. One can reveal one’s IPR to any other without the risk of digital copies being made.*

*The Trinfin My IP-Vault secures content from IPR theft. Content could be pdf files, documents, excel spreadsheets, html content or exe files / software. Contents could be anything like source codes, business plans, credit card information, personal identity information, copy write materials, photographs, drawings, stories, designs or any digital IPR.*

### **It could be your**

**Or any Digital IP that you create...**
